

Poultry farming guide

Optimize the performance of your birds thanks to Agrizone feed !

Get ready for the arrival of your birds !

Laying hens

- 1 Make sure the space is cleaned, disinfected and dried before the birds arrive. Put enough litter.
- 2 Provide enough feeders so that all the birds can feed simultaneously and at will. Adjust the height of the feeders so that they reach the middle of the chickens' backs.
- 3 Make sure the birds empty the feeders once a day. Clean the feeders regularly.
- 4 Store food in a cool, dry place.

Temperature

Outside of the brooding period, the birds' comfort temperature is between 19 and 21 °C (66 and 70 °F). Any deviation from temperature affects the welfare of your animals. You can use a heating system to counter the variations.

Water

Birds must have access to clean, fresh water all the times. Clean the drinkers regularly and adjust the height so that poultry can easily access it.

Light

From 18 weeks of age, increase the period of 30 minutes of brightness per week until you reached 16 hours a day. We recommend use one 25 watts bulb per 25 m² (270 ft²).

Litter

There should always be 5 to 10 cm (2 to 4 in.) of dry litter on the floor. Remove damp or soiled litter and add to the need.

Feeding

Feed laying feed at 100-120 g (3.5-4.2 oz) per day per hen. Offer insoluble grit at all times.

Online shopping made easy !

- Secure payment
- Free parcel delivery from \$49 of purchases
- Trusted delivery partners
- Easy 30-day return policy
